Summary of Commit a9985db

This commit represents the initial conversion of the RVNUG (Roanoke Valley .NET User Group) website to a modern React + TypeScript application using Vite as the build tool. Key highlights:

- **Project Structure & Tooling**
 - Sets up a React + TypeScript project scaffolded for Vite.
 - Adds a comprehensive `.gitignore`.
 - Includes a `package.json` with dependencies for React 19, React Router, TypeScript, ESLint, and Vite.
 - Adds a `vite.config.ts` for Vite configuration.
 - Provides a `serve.sh` script for local static serving.
- **GitHub Pages Deployment**
 - Adds a GitHub Actions workflow (`deploy.yml`) for automatic deployment to GitHub Pages on push to `main`.
- **Documentation**
 - Adds detailed documentation for:
 - General project info (`README.md`)
 - Meetup API integration and CORS solutions (`GITHUB_PAGES_INTEGRATION.md`, `MEETUP_INTEGRATION.md`)
 - Testing Meetup integration (`TESTING_MEETUP.md`)
 - Content updating instructions (`UPDATING.md`)
 - Netlify serverless proxy for Meetup API (`README.md`)
- **Meetup API Integration**
 - Implements multiple strategies for fetching Meetup events, including JSONP, public CORS proxies, and a Netlify serverless proxy (`meetup-events.js`).
 - Provides fallback to local JSON data if API requests fail.
- **Frontend Implementation**
 - Adds main React components and pages: `App.tsx`, `HomePage`, `EventsPage`, `EventDetailPage`, `TeamPage`, `SponsorsPage`, `ContactPage`, `NotFoundPage`.
 - Implements reusable UI components: `NavBar`, `Footer`, `EventCard`, `SponsorCard`, `TeamMemberCard`.
 - Adds custom hooks for loading events, sponsors, and team members.
 - Includes CSS files for all major sections and components.
- **Data & Assets**
 - Adds sample data files for events, sponsors, and team members in both `data` and `data`.
 - Includes images and SVG logos for branding and team/sponsor visuals.
- **Other**
 - MIT License included.
 - Scripts for copying data/assets and initial setup.

In summary:

This commit establishes a modern, maintainable, and fully documented React-based website for RVNUG, with dynamic event loading from Meetup, static fallback, and automated deployment to GitHub Pages.
