Technology Stack
The Plan

- **Frontend: Vite + TypeScript + React**
- **Backend: Python Proxy (meetup-proxy)**
- **Build Tools: PostCSS, ESLint, Prettier**
- **Modern development workflow: Shift Left, Automate, Code Quality, etc…**
- **Or… DevOps integration via Github Actions**

AI's Role in the Rewrite

- **Code generation from specifications**
- **Legacy code translation**
- **Automated debugging assistance**
- **MCP servers for additional tool calling**
- **Documentation generation**
- **Boilerplate code creation**
